DETAILED ACTION

Claim Objections

1. Claims 2, 3, and 36 are objected to because of the following informalities: In claim 2, line 7, "said gap" should be changed to –said gap—if it is the gap defined in claim 1; in claim 2, there is no antecedent basis for "said magnetic resistance" and "said sub-magnetic patch" if it is dependent in claim 1? It should be dependent only in claim 2. In claim 36, the recitation "said number of turns" is has no antecedent. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Maruyama et al (US Patent 6,400,330).

Maruyama et al disclose, in figure 2, an antenna structure comprising a metal casing 5, a ferromagnetic core 3, and a coil 13 wound about the core.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 29-31, and 35-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Teodoridis et al (US Patent 4,884,252).

Teodoridis et al disclose, in figure 6, an antenna structure used for a timepiece comprising an inductive antenna element 7 located in a metal case 2 of the timepiece. The patent to Teodoridis et al differs from the claimed invention because it does not disclose the specific inductance value and resistance value of the antenna element. However the inductance and resistance values of the antenna element are considered an obvious of design choice depending upon the desired frequency band of the antenna element.

Allowable Subject Matter

- 6. Claims 38, 43-48 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. Claims 2-28, and 39-42 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claim 2 recites an antenna structure comprising a main magnetic path in which a coil is wound about a magnetic core, a sub-magnetic path in which a coil is not wound about a magnetic core, the magnetic path formed along the magnetic core having a closed loop like configuration, a gap provided in part of the magnetic path, and the gap is configured to have magnetic resistance or magnetic permeability different from that of other parts of the magnetic path.

Application/Control Number: 10/511,912

Art Unit: 2821

Claim 39 recites an antenna structure comprising a main magnetic path in which a coil is wound about a magnetic core, a sub-magnetic path in which a coil is not wound about a magnetic core, the magnetic path formed along the magnetic core having a closed loop like configuration, wherein the antenna structure is suitable to be used under circumstances wherein a metal material is present in the vicinity of the antenna structure and a Q value retention ratio Rq.

The patents to Maruyama et al and Teodoridis et al do not teach this antenna structure.

8. The patents to D'Hont, Ross et al, Murukami, Ganter et al, Sonoda et al, and Gabe are cited as of interest showing the antenna similar to that disclosed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan Ho whose telephone number is (571) 272-1822.

The examiner can normally be reached on M-F (8:00AM - 5:00PM).

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/511,912
